

Due to growth of the service line and the enterprise, the Section of Pediatric Interventional Radiology at Phoenix Children's is recruiting for a full-time pediatric interventional radiologist.

The Section performs over 7500 image-guided procedures per year and is currently staffed by 3.5 full-time pediatric interventional radiologists and a full time pediatric neurointerventionalist. We perform a vast array of interventions, including but not limited to vascular access, treatment of vascular malformations, biliary procedures, feeding procedures, musculoskeletal procedures, angiography and embolization, and neurointerventional procedures. The Section has a long and rich history of teaching and clinical excellence. We participate in the multispecialty vascular anomalies clinic at Phoenix Children's and are active in numerous multispecialty conferences. Phoenix Children's has many centers of excellence, including the Heart Center, Center for Cancer & Blood Disorders and Barrow Neurological Institute at Phoenix Children's. Additionally, we have active solid organ and bone marrow transplant programs.

Participation in research is encouraged and is supported with research assistants. The Phoenix Children's IR department includes two Philips DSA rooms (one with biplane), dedicated ultrasound in each room, an IR-only pre-procedure area and a consult room. Subspecialized pediatric anesthesiologists provide anesthesia services.

There is a strong working relationship between the IR nurses, technologists and physicians, and by the time this physician position on-boards, there will be a dedicated IR APP and dedicated administrative assistance.

The Phoenix Children's Division of Radiology consists of 23 full-time radiologists subspecialized into Body, Neuro and IR sections, and is supported by a full-time imaging research PhD scientist. PCH Radiology faculty hold appointments to the University of Arizona College of Medicine (Phoenix), Mayo Clinic (Scottsdale), and Creighton University School of Medicine (Phoenix). An active program of teaching and research includes 3 ACGME-accredited Pediatric Radiology fellow positions, 2 additional non-accredited fellow positions (Neuro and PIR) as well as fellows, residents and medical students from affiliated Radiology programs. PCH maintains a Master Research Agreement with Philips Health Tech, which supports an active program of clinical translational research of early-stage development hardware and software applications in imaging and image-guided therapy. The 45,000 square foot Phoenix Children's Radiology department maintains state of the art imaging technology with regular refreshes supported by the recent Philips-Phoenix Children's Enterprise Agreement.

Phoenix Children's is a freestanding 433-bed children's hospital and is the largest pediatric facility in the Southwest USA. It is the only Level I designated pediatric trauma center in Arizona. Two additional inpatient floors will be opening in 2023 adding 100 new inpatient beds. There are currently 3 additional satellite outpatient and urgent care centers located across the Phoenix Valley region. Several new satellite Phoenix Children's locations are slated to open in the Phoenix Valley in 2022-23, some with interventional radiology services. These locations include two new free-standing hospitals with outpatient surgery centers and multidisciplinary clinics, a large free standing emergency department with multispecialty outpatient clinics, and an urgent care and sports medicine clinic attached to a 320-acre sports and entertainment complex.

Minimum requirements:

- MD or DO degree, or equivalent
- Completion of an ACGME-accredited diagnostic or interventional radiology residency

Phoenix Children's

- Completion of ACGME-accredited Pediatric Radiology or Adult Interventional Radiology fellowship
- Completion of a Pediatric Interventional Radiology fellowship (negotiable based on level of clinical experience)
- ABR certified or eligible
- Eligible for licensure in Arizona
