

## **Pediatric Interventional Radiologists of Florida PLLC**

Pediatric Interventional Radiologists of Florida (PIRF) is a physician-owned private practice contracted to provide exclusive pediatric interventional radiology services to Johns Hopkins All Children's Hospital (JHACH) in St. Petersburg, Florida. We are seeking to expand our team with a highly qualified, fellowship-trained pediatric interventional radiologist. This is an exceptional opportunity for a motivated professional to join a private practice pediatric interventional radiology practice serving an academic children's hospital at the ground level.

### **The Role:**

This is a long-term 1099 contractor position that offers significant flexibility in scheduling. The role encompasses the full spectrum of pediatric interventional radiology, including:

A broad range of procedures: Soft tissue biopsies, lumbar punctures, drainage procedures, ablations, central venous access, GU interventions, pain management, angiography/embolization, thrombectomy, and sclerotherapy.

Vascular Anomalies Clinic: Staffing a busy, multidisciplinary clinic serving the only health system on Florida's west coast offering this specialized team. Experience in this area is a valuable asset.

### **Our Environment**

State-of-the-Art Facilities: Services are currently provided in a dedicated suite within JHACH's cardiac catheterization lab. A new, state-of-the-art angiography suite is under construction within the operating rooms, which will streamline access to anesthesia services.

Clinical Volume: Our service currently handles over 2,100 interventional radiology-specific procedures annually, with a goal of reaching a full complement of three interventional radiologists to manage current volume.

Patient Support: Interventional Radiology patients at Johns Hopkins All Children's Hospital are supported by four advanced practice providers and a dedicated complement of Interventional Radiology nurses and technologists.

### **What We Offer**

Flexible Schedule: The contracted position requires 20 weeks on service/call and 17 weeks as the "back-up" Interventional Radiologist. The back-up interventional radiologist is required to be within 45 minutes of the hospital (in case needed by the primary interventional radiologist) and is responsible for staffing the vascular anomalies clinic (1/2 day on Tuesdays) and IR clinic (half day, Thursdays).

Professional Autonomy: This position has no diagnostic radiology responsibilities. Diagnostic moonlighting opportunities may be available for interested/qualified individuals.

Academic and Career Growth: Qualified candidates may be eligible for an academic appointment at Johns Hopkins University School of Medicine. Ample time can be provided for research.

Other Practice Opportunities: Our contracted physicians may pursue adult interventional/diagnostic radiology opportunities beyond Johns Hopkins All Children's Hospital.

Compensation: The compensation package is highly competitive with the current market and is commensurate with experience.

Relocation: Our location in the Tampa-St. Petersburg area offers year-round sunshine, diverse cultural and recreational activities, and is minutes from beautiful Gulf beaches.

### **Ideal Candidate**

The ideal candidate will be a fellowship-trained pediatric international radiologist. We also highly value candidates with adult and pediatric interventional radiology training and those with neurointerventional experience, particularly with stroke and facial vascular malformations. Shorter-term, per diem opportunities are also available while we build our full complement of staff.
