

The Section of Pediatric Interventional Radiology at Phoenix Children's Hospital (PCH) is recruiting for a full-time pediatric interventional radiologist.

The Section performs over 7500 image-guided procedures per year, and is currently staffed by three full time pediatric interventional radiologists and a full time pediatric neurointerventionalist. We perform a vast array of interventions, including but not limited to vascular access, treatment of vascular malformations, biliary procedures, feeding procedures, musculoskeletal procedures, angiography and embolization, and neurointerventional procedures. The Section has a long and rich history of teaching and clinical excellence. We participate in the multispecialty vascular anomalies clinic at PCH and are active in numerous multispecialty conferences. Phoenix Children's Hospital has many centers of excellence, including the Heart Center, Center for Cancer & Blood Disorders and Barrow Neurological Institute at Phoenix Children's. Additionally, we have an active liver transplant program.

Participation in research is encouraged and is supported with research assistants. The PCH IR department includes two Philips DSA rooms (one with biplane), dedicated ultrasound in each room, a pre-procedure area and a consult room. Subspecialized pediatric anesthesiologists provide anesthesia services.

The PCH Division of Radiology consists of 25 full-time radiologists subspecialized into Body, Neuro and IR sections, and is supported by a full-time imaging research PhD scientist. PCH Radiology faculty hold appointments to the University of Arizona College of Medicine (Phoenix), Mayo Clinic (Scottsdale), and Creighton University School of Medicine (Phoenix). An active program of teaching and research includes 3 ACGME-accredited Pediatric Radiology fellow positions, 2 additional non-accredited fellow positions (Neuro and PIR) as well as fellows, residents and medical students from affiliated Radiology programs. PCH maintains a Master Research Agreement with Philips Health Tech, which supports an active program of clinical translational research of early stage development hardware and software applications in imaging and image-guided therapy. The 45,000 square foot PCH Radiology department maintains state of the art imaging technology with regular refreshes supported by the recent Philips-PCH Enterprise Agreement.

Phoenix Children's Hospital is a freestanding 433-bed children's hospital and the only Level I designated pediatric trauma center in Arizona. It is the largest pediatric facility in the Southwest USA. A new 42,000 square foot Emergency Department opened in 2017. In addition to the main campus tower, which opened in 2011, 3 additional satellite outpatient and urgent care centers are located across the Phoenix Valley region. A new women and children's specialty tower will open in 2021.

Minimum requirements:

- MD or DO degree, or equivalent
- Completion of an ACGME accredited diagnostic radiology residency
- Completion of a Pediatric Interventional Radiology fellowship (negotiable based on level of clinical experience)
- ABR certified or eligible
- Eligible for licensure in Arizona
